

PineRE Recovery Design System (Draft v0.1)

> Internal reference document — Architecture Freeze

Purpose

PineRE Recovery is a standalone Buildroot + LVGL recovery environment.
Its purpose is to boot independently of the operating systems it can recover.

Design Philosophy

- Simple, but not dumb.
- One responsibility per layer.
- Every feature earns its place.
- Categories introduce; actions explain.
- One outcome. One sentence.
- Read aloud before freezing.
- Pass the Grandad Test.
- PineRE speaks with one voice.

Architecture

...

LVGL

Menu Tree

Dispatcher

Shell Script

Linux / BusyBox

...

Single Source of Truth

- menu_assets.txt — words
- main.c — structure
- pinere_menu.c — behaviour
- /usr/libexec/pinere/scripts — work

Visual Language

Symbols

| Symbol | Meaning |

|---|---|

| ✓ | Enabled / Running / Success |

| ✗ | Disabled / Stopped / Not Running |

| ★ | Current default |

| > | Current selection |

| → | Reserved for forward navigation |

Typography (Current Direction)

- IBM Plex Sans — UI
- IBM Plex Mono — logs, terminal, diagnostics

Voice

Categories:

- Choose what to boot.
- Recover and repair your installation.
- Manage storage and files.
- Manage background services.
- System information and hardware tests.
- Developer tools and advanced options.

Writing rules:

- Explain the outcome.
- Avoid Linux implementation details.
- Prefer everyday language.

Current Recovery Structure

- Boot
- Recovery
- Storage
- Services
- Diagnostics
- Developer

Interaction

Toggle items:

- Label shows ✓ or ✗.
- A button shows Enable or Disable.
- Details show Running ✓ or ✗.

Status

Draft for internal reference.
